

## NLT Nearchive™

### **An affordable Archive for Avid Interplay®**

NLT's Nearchive provides desktop-based, drag-and-drop archiving and retrieval of media assets such as clips and sequences. The Interplay database tracks media files stored in external storage, so team members can look for both archived and online media using a single interface such as Interplay Access. User's simply drag and drop clips to the restore folder and NLT's Nearchive server moves the media assets to the ISIS® SAN where they appear online automatically.

Clips are retained in Interplay where rich metadata can be searched using Interplay Access to find archived clips. When the clips are found, drag and drop them on the restore icon and the MXF media is restored to the ISIS workspace.

NLT Nearchive is integrated with NLT's AutoIngest Direct. Use AutoIngest Direct to ingest clips to Interplay... the Nearchive server automatically moves a copy to near-line storage and reserves the clip's metadata in Interplay for later searches.

This workflow allows an automatic backup of camera media without user interaction. Automatically keep P2, SXS or SD card media before the photographer originals are lost.

### **Nearchive Features**

- Fully integrated with Avid Interplay.
- Automates moving valuable clips to near-line storage.
- Integrates seamlessly with AutoIngest Direct.
- Supports automatic hands free operation.
- Preserves all enhanced camera metadata for searching using Interplay Access, find clips archived quickly using familiar tools.
- Quickly restore clips from near-line storage to Avid ISIS.
- Implement automatic ingest and short term archive of Panasonic P2, Ikegami GFCAM or Sony XDCAM, and XDCAM EX media. Fully manage these stored clips with Avid Interplay.
- Feel free to clean out the NEWS workspace at the start of each day. All your camera crew's media can be kept for months in near-line Raid-5 storage. Fully searchable using Interplay and quickly restored.
- You'll be ready when *yesterday's news is news again today.*

### **Do More by Doing Less**

#### **Cost Savings and Benefits**

- No changes to your staff's workflow, automatically keep all your media for reuse... **because, you know you'll need it again soon...**
- Keep all your recent news footage near-line but instantly searchable with Avid Interplay.
- Immediate cost savings by moving media off of ISIS storage onto near-line Raid storage until needed again.
- Use Avid Interplay Access to search the near-line storage... no training required.
- Rich metadata gathered by NLT's AutoIngest streamlines the workflow.
- AutoIngest automatically sends clip media files to near-line storage.
- When today's news is done, feel free to delete the media from Interplay/ISIS. Nearchive has the MXF files and the metadata is locked in Interplay for later use.
- Don't use a USB drive to save your expensive camera memory cards, use Nearchive and Interplay to catalog, search for and reuse your assets quickly.
